

For GPD 503
Adjustable Frequency Drives

Software Option EPROMs

The GPD 503 is an evolving product. Changes in capabilities or horsepower ratings involve changes in EPROMs. Therefore, newer EPROMs may not be compatible with older production drives.

Some of the EPROMs are related to a change in part number of the Control PCB. The chart below lists currently available Control PCBs and the EPROM numbers associated with them.

| Control PCB | EPROM prefix |
|---|--------------------------------|
| ETC613130 | NSG615____ or NSG617____ |
| ETC613180 or ETC613190 or ETC613200 | NSG616____ or NSG618____ |

If you receive two sets of option EPROMs, check before installing them to make sure that you use the correct ones for your drive. Either verify against the stickers on the old EPROMs or the part number printed on the Control PCB.

The unused set of EPROMs is NOT USEABLE for your drive.

Please ship back to:

MagneTek
16555 W. Ryerson Road
New Berlin, WI 53151
Attention: Automation Technologies,
AR Department - Return Code SR1.
