Procedure for Replacing ΣI with ΣV

Applicable Model

Motor : Σ (SGM , SGMP , SGMG)

Servo Amplifier : Σ (SGDA-□□□S , SGDA-□□□P ,
SGD-□□□N , SGD-□□□H , SGDB-□□AD□)

1. Notes on Application

Check Item	Notes	
	Usage condition in Σ	Usage of Σ -V
Using SGD/SGDA/SGDB Type Servo Amplifier	Using S-phase output of absolute encoder	S-phase output is not available in SGDV. There are no alternatives.
	Using auto tuning function	The same auto-tuning function as Σ is not provided in SGDV. The tuneless function is the alternative function. Please use the advanced auto-tuning function or moment of inertia identification function of SigmaWin+ when you need to know the moment of inertia ratio.
	Using speed bias function	The speed bias function is not provided in SGDV. The positioning time can be shortened by using "Positioning setting (model following control)" of the advanced auto tuning function.
	The main circuit power supply input terminal and control power supply input terminal are common in the SGD/SGDA series	The main circuit power supply input terminal and control power supply input terminal are separated. Please confirm the method of power activation.
	Using SGD(A)-□□□S (speed · torque control type)	There is no distinction between the speed torque control type and positional control type in SGDV. It is possible to use either control type.
	Using SGD(A)-□□□P (position control type)	There is no distinction between the speed torque control type and positional control type in SGDV. It is possible to use either control type.

	<p>Using SGD-□□□N or SGDB-□□AN (MECHATROLINK communication support type)</p>	<p>Please use MECHATROLINK-II communication reference servo amplifier (SGDV-□□□□1□ type). SGDV-□□□□1□ type servo amplifier corresponds to MECHATROLINK-II communication (4Mbps). Changing software of the host controller may become necessary when using the SGDV-□□□□1□ type to replace SGD-□□□N type, SGDB-□□AN type, because the corresponding MECHATROLINK command is different.</p>
	<p>Using SGD-□□□H (RS-422 communication support type) or SGDB-□□AM (for multi-function position control)</p>	<p>There is no option module with the interface that can replace these. Please consider the replacement with MECHATROLINK-II communication reference servo amplifier (SGDV-□□□□1□ type).</p>
	<p>Using SGDB-□□□□□-P (duct ventilation type)</p>	<p>Please inquire to the factory. Although there is a model that corresponds to the duct ventilation type but the capacity is limited and the installation size is different.</p>

The following functions and performances were improved by replacing Σ with Σ- V.

- Added the small capacity medium inertia series (SGMJV type) to the motor lineup.
- Increased the peak speed of the motor from 4500rpm to 6000 rpm. (SGMJV type and SGMAV type)
- Improved the speed frequency response characteristic for performance.
SGDA / SGDB 250Hz ⇒ SGDV 1.6kHz (Load inertia=Rotor inertia of motor)
- Supports pulse train command input frequency of 4Mpps.
SIGN+PULSE and CW/CCW are 4Mpps. The A/B-phase 2-phase pulse train becomes 4Mpps at 1x2, 2Mpps at 2x2, and 1Mpps at 4x2.
However, it is 200kpps when connecting with open collector output.
- RoHS compliant as standard product.
- Safety standard (Safety Stop-0) embedded in standard products.
- PC connection changed from RS-232C communication to USB.

1 - 1 . Check List when replacing Σ with Σ - V

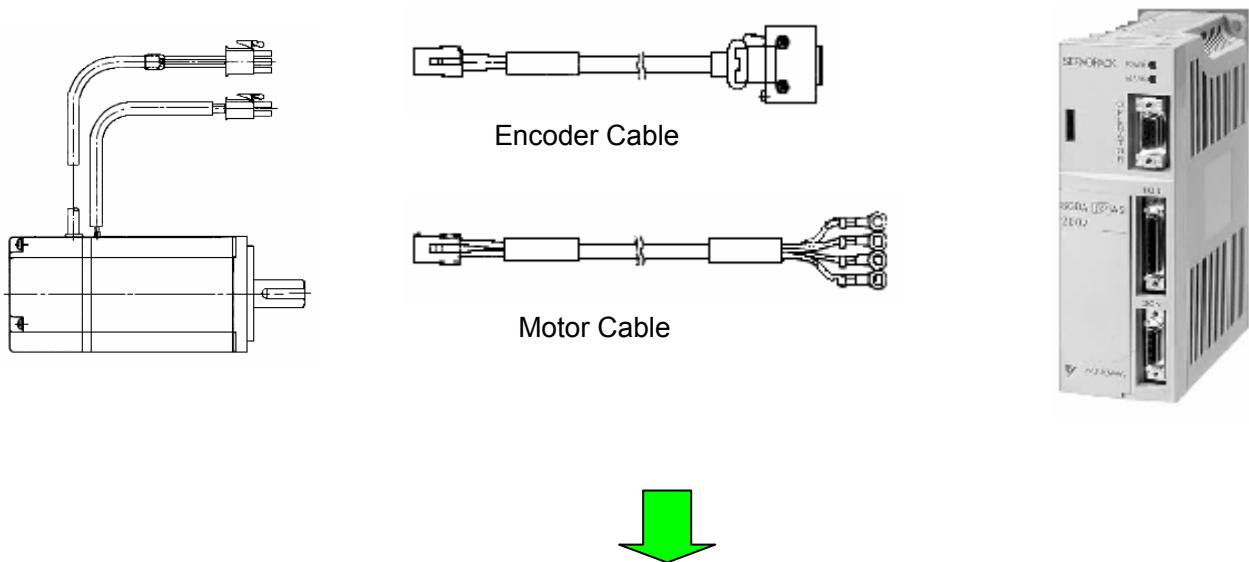

Category	Item	Where to check	Checked
Motor	Main Body	<p><Confirmation of main body installation dimension/position></p> <ul style="list-style-type: none"> • Please confirm installation dimensions of the motor in-use and machine in-use. <p>Inside low diameter Mounting hole pitch Mounting hole diameter Axis diameter Axis shape (straight, key, center tap, and taper)</p>	
		<p>< Confirmation of special specification ></p> <ul style="list-style-type: none"> • Please confirm whether the motor you are using now is a special type. <p>Please confirm the specification with the delivery specifications if you are using a special type.</p>	
	Voltage	<p><Correspondence of AC100V specification></p> <ul style="list-style-type: none"> • Selected the both servo motor and servo amplifier which were for 100V when using the AC100V power supply in Σ-I. However, only AC200V motor is available in the Σ-V. Select the proper servo amplifier when using AC100V power supply. 	
	Cable	<p><Confirmation of wiring direction></p> <ul style="list-style-type: none"> • Please confirm how to wire, and also confirm that the machine has no interference. 	
Servo Amplifier Hardware	Main Body	<p>< Confirmation of main body mounting position ></p> <ul style="list-style-type: none"> • Please confirm the size (W·H·D) and the mounting hole position of the servo amplifier in-use. 	
		<p>< Confirmation of special specification ></p> <ul style="list-style-type: none"> • Please confirm whether the servo amplifier in-use does not have your own NP, and product shape, and also confirm that any special processes etc. are not done by referring the delivery specification. 	
	Main Circuit	<p>< Confirmation of wiring ></p> <ul style="list-style-type: none"> • Changed to the connector connection from the terminal block for models of 1.5kW or less. <p>The main circuit connector, terminal block position, terminal marking and order are different between the servo amplifier in-use and the replacement servo amplifier.</p> <p>Please consider the substitution of extension of wiring when there is not enough room in wiring.</p>	

		<p><Regenerative process></p> <ul style="list-style-type: none"> Regenerative processing unit (JUSP-RG08/JUSP-RG08C) is used when regeneration processing is necessary in SGD/SGDA. In the SGDV, the regeneration processing is possible by connecting the regenerative resistor between the terminal B1 and B2. 	
		<p><AC100V specification></p> <ul style="list-style-type: none"> Corresponds with the voltage specification "F" (Input 100V, Output 200V) servo amplifier. The servo motors are AC200V. 	
		<p><Single phase AC200V specification></p> <ul style="list-style-type: none"> Three-phase circuit AC200V is standard in the Σ-V series servo amplifier. <p>Change the parameter "Function selection switch B" when using single-phase power supply. (Pn00B.2=1)</p> <p>Connect to terminal L1 and L2 when using the single-phase power supply.</p> <p>Please note that the torque-speed characteristic is different from the three-phase circuit power supply specifications.</p> <p>Also please note that the size of the 1.5kW single-phase AC200V servo amplifier (SGDV-120A□□A008000) is the same as the 3kW three-phase AC200V amplifier (SGDV-200A□□A).</p>	
		<p><DC power supply input></p> <ul style="list-style-type: none"> Change the parameter "Function selection switch 1" when using DC power supply input. (Pn001.2=1) <p>Note) Connect the main circuit DC power supply only after changing the parameter.</p>	
	Control circuit	<p><Confirmation of wiring></p> <ul style="list-style-type: none"> The control circuit power supply input terminal is separated in the SGDV type when it is replaced from the SGD type and SGDA type. 	
Servo amplifier software	Software	<p><Confirmation of special software existence></p> <ul style="list-style-type: none"> Confirm whether the software of the servo amplifier in-use is standard software from the version number. Contact Yaskawa with the version number if you are not sure the software is standard or not. 	
	Constant	<p><Confirmation of user constant></p> <ul style="list-style-type: none"> Confirm the user constant of the servo amplifier in-use. <p>SigmaWin + has a function to convert from the user constant of Σ into the parameter of Σ-V.</p>	
	Peripherals	<p><Confirmation of the digital operator></p> <ul style="list-style-type: none"> The digital operators for Σ and Σ-V are different. Please purchase a new digital operator if needed. 	

		<p><Confirmation of PC connection cable></p> <ul style="list-style-type: none"> The PC connection cables for Σ and Σ-V are different. Please purchase a new cable when using SigmaWin+. 	
	Others	<p>In the Σ series, the stopping method is DB stop or free-run stop when an alarm is detected. On the other hand, factory setting for G2 is 0 speed stop in Σ-V series. It is possible to change to the DB stop or free-run stop when the parameter Pn00B.1=0 is set to 1 . The user constant conversion function of SigmaWin + is not able to convert this.</p>	

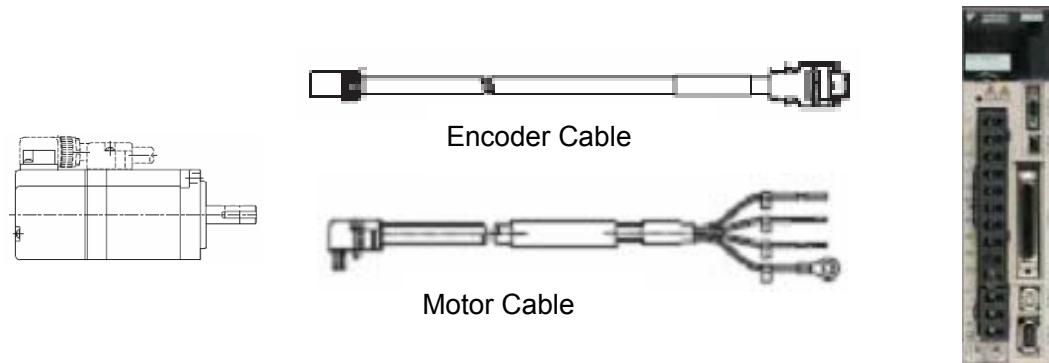

1 - 2 . Concept of Replacement

When replacing Σ series servo motor/servo amplifier with Σ -V series, the following methods are available.

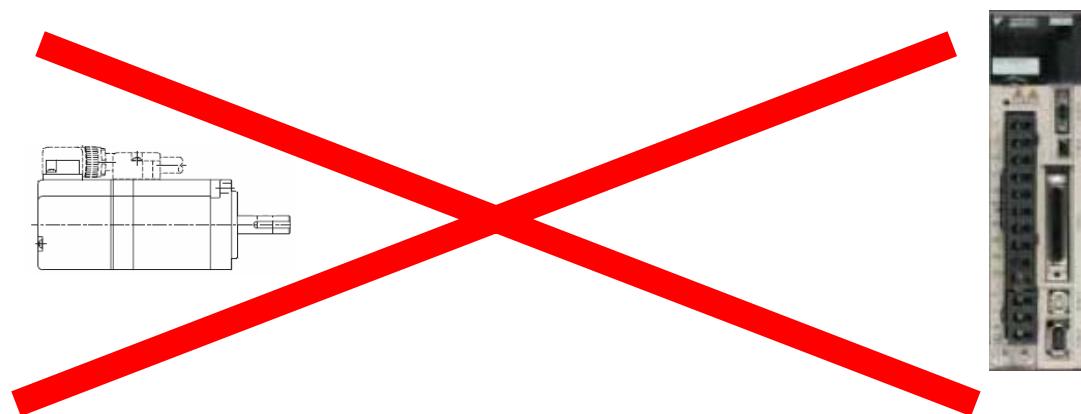

•Case 1

Replacing all the motors, servo amplifier, and cables with Σ -V series.

•Case 2

Only the motor or amplifier cannot be replaced by itself and the existing cable of Σ series cannot be used as is.

1-3. Replacement List

Replacing SGM with SGMJV

Type in-use of Σ series	Replacing type Σ-V series		Replacing Method		Note	
Servo Amplifier	Servo Motor	Servo Amplifier	Servo Motor	Case 1	Case 2	
SGDA-A3AS	SGM-A3A	SGDV-R70A01A	SGMJV-A5A	Applicable	N/A	30W version is not available. Use 50W . Axis diameter changes to φ8 from φ6

Please refer to the graph on the left to replace the SGM type with the types of SGMAV or SGMJV.

Replace with the SGMAV type when the ratio of load inertia moment and rotor inertia moment is five times or less, or the load ratio is 60% or more. Replace with the SGMJV type as for the rest of that.

【 Reference 】

The graph on the left shows the load ratio when replacing the SGM type which is used by 70% with the types of SGMAV and SGMJV.

The load ratio increases though the control is steady because the rotor inertia moment of SGMJV type is large.

(Comparison between SGMG and SGMGV)

Σ (Rating 1500min-1)	$\Sigma - V$	Motor Characteristic					
		Rotor Inertia Moment ($\times 10^{-4} \text{kg} \cdot \text{m}^2$)		Rated Torque (N · m)		Peak Torque (N · m)

2-4. Notes at Machine Installation

Please cautious about the cable wiring as well as the size of the flange, spigot, and shaft at machine installation. The pictures shown below are the part of the motor cable wiring of □40 and □60.

□ 4 0

□ 6 0

3. Servo Amplifier

3-1. Type Comparison Table

1-3. Please refer to the replacement list

The servo amplifier type has been changed from the capacity value to output current value.

3-2. Terminal Table

(1) Main circuit terminal

Σ		$\Sigma - V$		
SGDA type	SGDB type	SGDV type		
Terminal marking	Terminal marking	Terminal marking	Function	
R	R	L1	Main circuit power supply input terminal	
T	S	L2		
	T	L3		
U	U	U	Servomotor connection terminal	
V	V	V		
W	W	W		
R	r	L1C	Control power supply input terminal (100V/200V type)	
T	t	L2C		
	P,P1,B	B1/(+)	External regenerative resistor connection terminal	
		B2	The connection method is different in $\Sigma - V$	
		B3		
		(+1)	DC reactor connection terminal for power line harmonics control	
		(+2)		
		(-1)		
		(-2)		
P	P	B1/(+)	Main circuit forward side terminal	
N	N	(-)	Main circuit reverse side terminal	
		(-2)		

- Single-phase power supply AC200V:

It is possible to change to single phase power supply AC200V by the parameter (Factory setting is “3-phase power supply”) however, the torque - rotational speed characteristic is different from the three-phase power supply specification.

(2) Control Circuit Terminal

Σ-V Notes

1. Do not use the reserved terminal of "—"
2. Connect the shield line of the cable for I/O with the connector shell. It should be connected with frame ground (FG) at the servo amplifier side connector.
3. The following input signals can change the parameter allocation
/DEC,P-OT,N-OT, EXT1, EXT2 ,EXT3
4. The signals of /COIN, /V-CMP, /TGON, /S-RDY, /CLT, /VLT, /BK, /WARN, /NEAR are able to allocate to /SO1, /SO2, /SO3

Please refer to the Σ-V manual for details.

Comparison between SGDA-□□□S type [Analog voltage reference type] (speed & torque control type) and SGDV type

Terminal No.	SGDA type	SGDV type	Terminal Marking	Function
	36pin	50pin		
1	9	T-REF		Torque reference input
3	5	V-REF		Speed reference input
2,4,6,10	1,2,6,10	GND		Ground
5	4	SEN		SEN signal input
7	—	/BK+		Brake interlock output (*3)
8	25	/V-CMP+(./COIN+)		Speed match detection output (*2)
9	27	/TGON+		Rotation detection output (*2)
11	45	/P-CL		Forward side external torque control input (*2)
12	46	/N-CL		Reverse side external torque control input (*2)
13	47	+24VIN		External power supply input
14	40	/S-ON		Servo ON input (*2)
15	41	/P-CON		P operation input (*2)
16	42	P-OT		Forward drive prohibited input (*2)
17	43	N-OT		Reverse drive prohibited input (*2)
18	44	/ALM-RST		Alarm reset input (*2)
19	—	SG-PG		Single ground for PG signal output
20	33	PAO		PG frequency dividing output A-phase
21	34	/PAO		
22	35	PBO		PG frequency dividing output B-phase
23	36	/PBO		
24	19	PCO		PG frequency dividing output C-phase
25	20	/PCO		
26	—	PSO		S-phase signal output
27	—	/PSO		
28	21	BAT(+)		Battery(+)
29	22	BAT(−)		Battery(−)
30	37	ALO1		Alarm code output
31	38	ALO2		
32	39	ALO3		
33	—	SG-AL		Signal ground for alarm code output
34	31	ALM+		Servo alarm output
35	32	ALM-		
36	Shell	FG		Frame Ground

(*2): The sequence I/O is factory setting

The allocation change is possible by using the user parameter in Σ-V, but not in Σ series

(*3): Change the setting of one of three factory setting output signals by user parameter if needed

The number of CN1 input signal connector pins of Σ series SGDA type and $\Sigma\text{-}V$ series SGDV type are different.

The CN2 encoder connector is not compatible.

The CN5 analogue monitor connector is compatible.

Comparison between SGDA—□□P type [pulse train reference type] (position control type) and SGDV type

SGDA type	SGDV type	Terminal Marking	Function
36pin	50pin		
1	7	PULS	Reference pulse input
2	8	/PULS	
3	11	SIGN	Reference symbol input
4	12	/SIGN	
5	15	CLR	Clear input
6	14	/CLR	
7	—	/BK+	Brake interlock output (*3)
8	25	/V-CMP+(./COIN+)	Speed match detection output (*2)
9	27	/TGON+	Rotation detection output (*2)
10	1,2,6,10	GND	Ground
11	45	/P-CL	Forward side external torque control input (*2)
12	46	/N-CL	Reverse side external control input (*2)
13	47	+24VIN	External power supply input
14	40	/S-ON	Servo ON input (*2)
15	41	/P-CON	P operation input (*2)
16	42	P-OT	Forward drive prohibited input (*2)
17	43	N-OT	Reverse drive prohibited input (*2)
18	44	/ALM-RST	Alarm reset input (*2)
19	—	SG-PG	Single ground for PG signal output
20	33	PAO	PG frequency dividing output A-phase
21	34	/PAO	
22	35	PBO	PG frequency dividing output B-phase
23	36	/PBO	
24	19	PCO	PG frequency dividing output C-phase
25	20	/PCO	
26	—	PSO	S-phase signal output
27	—	/PSO	
28	21	BAT(+)	Battery(+)
29	22	BAT(-)	Battery(−)
30	37	ALO1	Alarm code output
31	38	ALO2	
32	39	ALO3	
33	—	SG-AL	Signal ground for alarm code output
34	31	ALM+	Servo alarm output
35	32	ALM-	
36	Shell	FG	Frame ground

(*2): The sequence I/O is factory setting

The allocation change is possible by using the user parameter in Σ-V, but not in Σ series

(*3): Change the setting of one of three factory setting output signals by user parameter if needed

The number of CN1 input signal connector pins of Σ series SGDA type and Σ-V series SGDV type are different.

The CN2 encoder connector is not compatible.

The CN5 analogue monitor connector is compatible.

Comparison between SGDB—□□□D type and SGDV type

Terminal No.		Terminal Marking	Function
SGDB type	SGDV type		
50pin	50pin		
1	1	SG	Signal Ground
2	2	SG	Signal Ground
3	3	PL1	Battery for open collector reference
4	4	SEN	SEN signal input
5	5	V-REF	Speed reference input
6	6	SG	Signal Ground
7	7	PULS	Reference pulse input
8	8	/PULS	Reference pulse input
9	9	T-REF	Torque reference input
10	10	SG	Signal Ground
11	11	SIGN	Reference code input
12	12	/SIGN	Reference code input
13	13	PL2	Battery for open collector reference
14	14	/CLR	Clear input
15	15	CLR	Clear input
16	-	TRQ-M	Torque monitor
17	-	VTG-M	Speed monitor
18	18	PL3	Battery for open collector reference
19	19	PCO	PG frequency dividing output C-phase
20	20	/PCO	PG frequency dividing output C-phase
21	21	BAT /BAT(+)	Battery (+)
22	22	BAT0 / BAT(-)	Battery (-)
23	-	+12V	Battery for analog reference
24	-	-12V	Battery for analog reference
25	25	/V-CMP//COIN	Speed match detection output
26	26	/V-CMP//COIN	Speed match detection output
27	27	/TGON+	Rotating detection output
28	28	/TGON-	Rotating detection output
29	29	/S-RDY+	Servo-ready output
30	30	/S-RDY-	Servo-ready output
31	31	ALM+	Servo alarm output
32	32	ALM-	Servo alarm output
33	33	PAO	PG frequency dividing output A-phase
34	34	/PAO	PG frequency dividing output A-phase
35	35	PBO	PG frequency dividing output B-phase
36	36	/PBO	PG frequency dividing output B-phase
37	37	ALO1	Alarm code output
38	38	ALO2	Alarm code output
39	39	ALO3	Alarm code output
40	40	/S-ON	Servo ON input (*2)
41	41	/P-CON	P operation input (*2)
42	42	P-OT	Forward drive prohibit input (*2)
43	43	N-OT	Reverse drive prohibit input (*2)
44	44	/ALMRST	Alarm reset input
45	45	/P-CL	Forward side external torque limit input
46	46	/N-CL	Reverse side external torque limit input
47	47	+24 VIN	External power supply input
48	-	PSO	S-phase signal output
49	-	/PSO	S-phase signal output
50	-	FG	Frame Ground

(*2): The sequence I/O is factory setting

The allocation change is possible by using the user parameter in Σ-V, but not in Σ series

(*3): Change the setting of one of three factory setting output signals by user parameter if needed

Comparison between SGDA-□□□N type [MECHATROLINK communication reference type] and SGDV type

Σ		$\Sigma-V$		Function	Remarks
SGDA-□□□N	SGDV-□□□□1□□	Terminal No.	Terminal Marking		
Terminal No. 26pin	Terminal Marking 26pin	Terminal No. 26pin	Terminal Marking		
1 /BK	1 /BK(+) (/SO1+)	Brake interlock output			
2 BK-SG	2 /BK(-) (/SO1-)	Brake interlock output	Function is the same though the terminal marking is different		
3 ALM	3 ALM+	Servo alarm output			
4 ALM-SG	4 ALM-	Servo alarm output	Function is the same though the terminal marking is different		
5 —	5 —	—	Reserved terminal		
6 +24VIN	6 +24VIN	External power supply input			
7 P-OT	7 P-OT (/SI1)	Forward drive prohibit input			
8 N-OT	8 N-OT (/SI2)	Reverse drive prohibit input			
9 /DEC	9 /DEC (/SI3)	Homing deceleration LS input			
10 /EXT	10 /EXT1 (/SI4)	External latch signal 1 input	There is just one external latch signal in Σ		
— —	11 /EXT2 (/SI5)	External latch signal 2 input			
— —	12 /EXT3 (/SI6)	External latch signal 3 input			
— —	13 /SI0	General purpose input			
14 BAT(+)	14 BAT(+)	Battery(+)	When using absolute encoder		
15 BAT(-)	15 BAT(-)	Battery(-)	When using absolute encoder		
— —	16 SG	Signal ground			
— —	17 PAO	PG frequency dividing output A-phase			
— —	18 /PAO

— —	24 /SO2-	General purpose output			
— —	25 /SO3+	General purpose output			
— —	26 /SO3-	General purpose output			
26 FG	— —	Frame Ground			

The connector is different though the number of CN1 I/O signal pins of the Σ series and $\Sigma-V$ series are the same.

Comparison between SGDB-□□□N type [MECHATROLINK communication reference type] and SGDV type

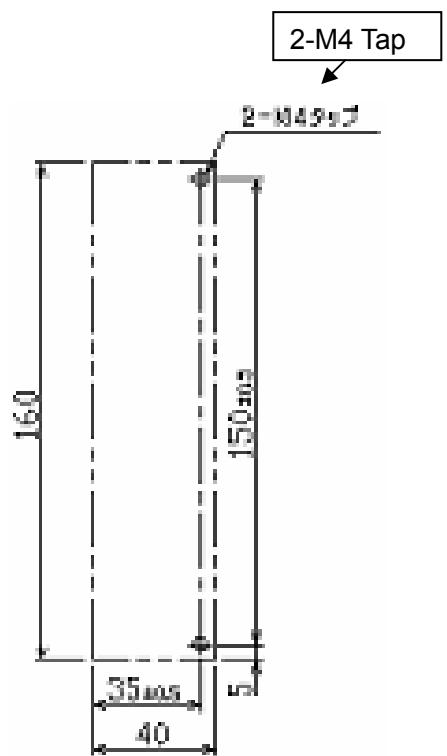

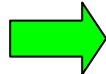

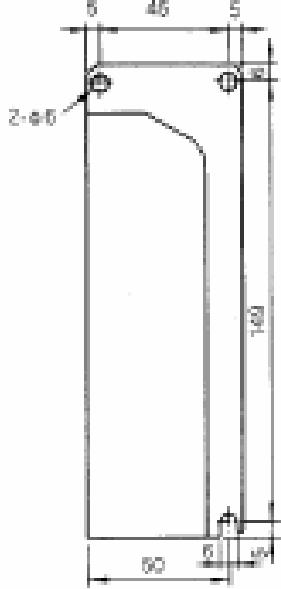

Σ		Σ-V		Function	Remarks		
SGDB-□□□N		SGDV-□□□□1□□					
Terminal No.	Terminal Marking	Terminal No.	Terminal Marking				
26pin		26pin					
1	/BK	1	/BK(+) (/SO1+)	Brake interlock output			
2	BK-SG	2	/BK(-) (/SO1-)	Brake interlock output	Funciton is the same though the terminal marking is different		
3	ALM	3	ALM+	Servo alarm output			
4	ALM-SG	4	ALM-	Servo alarm output	Funciton is the same though the terminal marking is different		
5	—	5	—	—	Reserved terminal		
6	+24VIN	6	+24VIN	External power supply output			
7	P-OT	7	P-OT (/SI1)	Forward drive prohibit input			
8	N-OT	8	N-OT (/SI2)	Reverse drive prohibit input			
9	/DEC	9	/DEC (/SI3)	Homing deceleration LS input			
10	/EXT	10	/EXT1 (/SI4)	External latch signal 1 input	There is just one external latch signal in Σ		
—	—	11	/EXT2 (/SI5)	External latch signal 2 input			
—	—	12	/EXT3 (/SI6)	External latch signal 3 input			
—	—	13	/SI0	General input			
—	—	14	BAT(+)	Battery(+)	When using absolute encoder		
—	—	15	BAT(-)	Battery(-)	When using absolute encoder		
—	—	16	SG	Signal Ground			
—	—	17	PAO	PG frequency dividing A-phase			
—	—	18	/PAO				
—	—	19	PBO	PG frequency dividing B-phase			
—	—	20	/PBO				
—	—	21	PCO	PG frequency dividing C-phase			
—	—	22	/PCO				
—	—	23	/SO2+	General purpose output			
—	—	24	/SO2-	General purpose output			
—	—	25	/SO3+	General purpose output			
—	—	26	/SO3-	General purpose output			
26	FG	—	—	Frame Ground			

The connector is different thought the number of CN1 I/O signal pins of the Σ series and Σ-V series are the same.

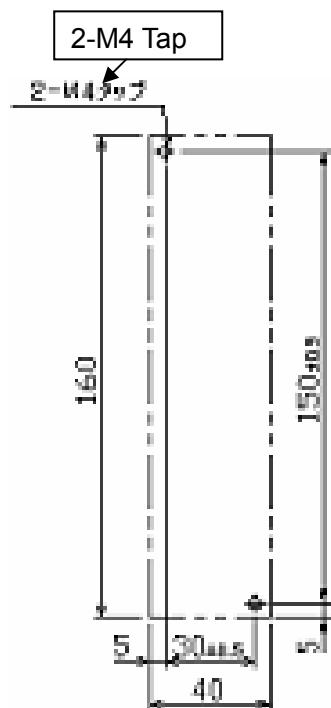

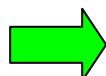

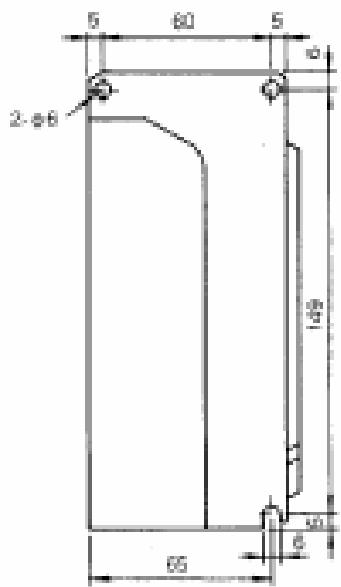

3-3. Installation Size

Σ-V series servo amplifier is not compatible with Σ series servo amplifier in the dimension and mounting dimension. The position of the screw for the installation is different.

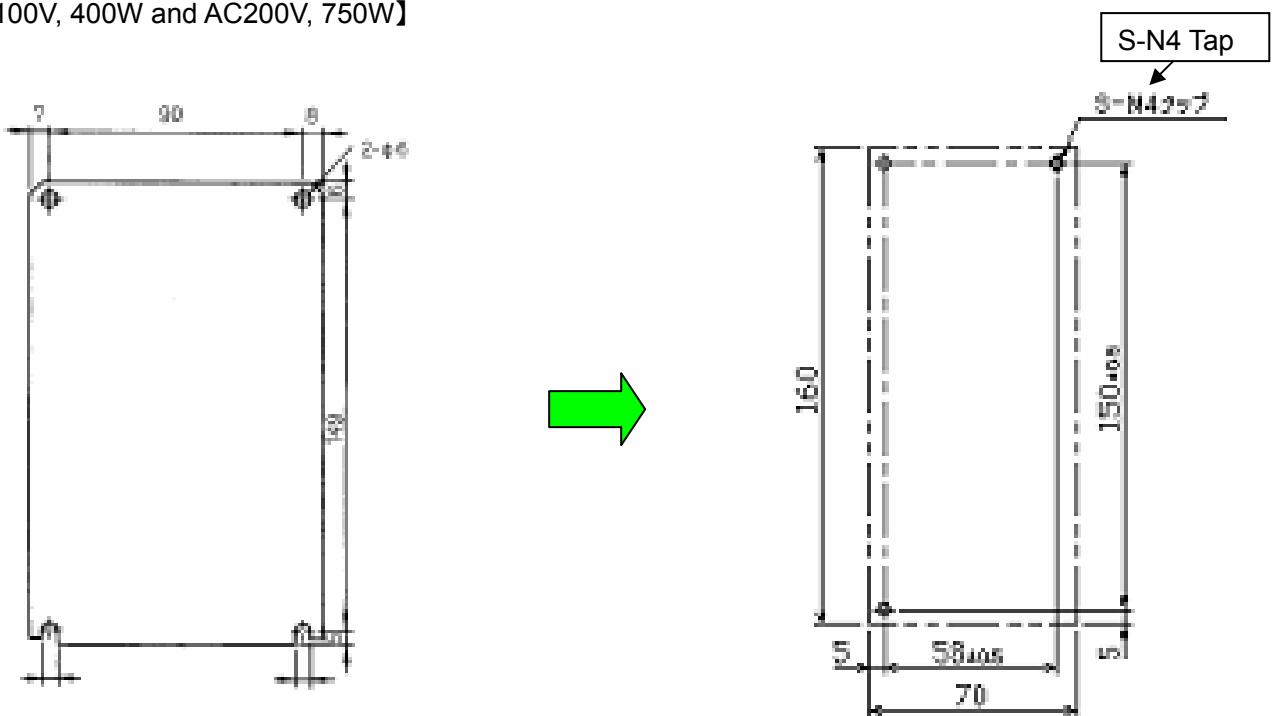

【AC200V, 200W or less】

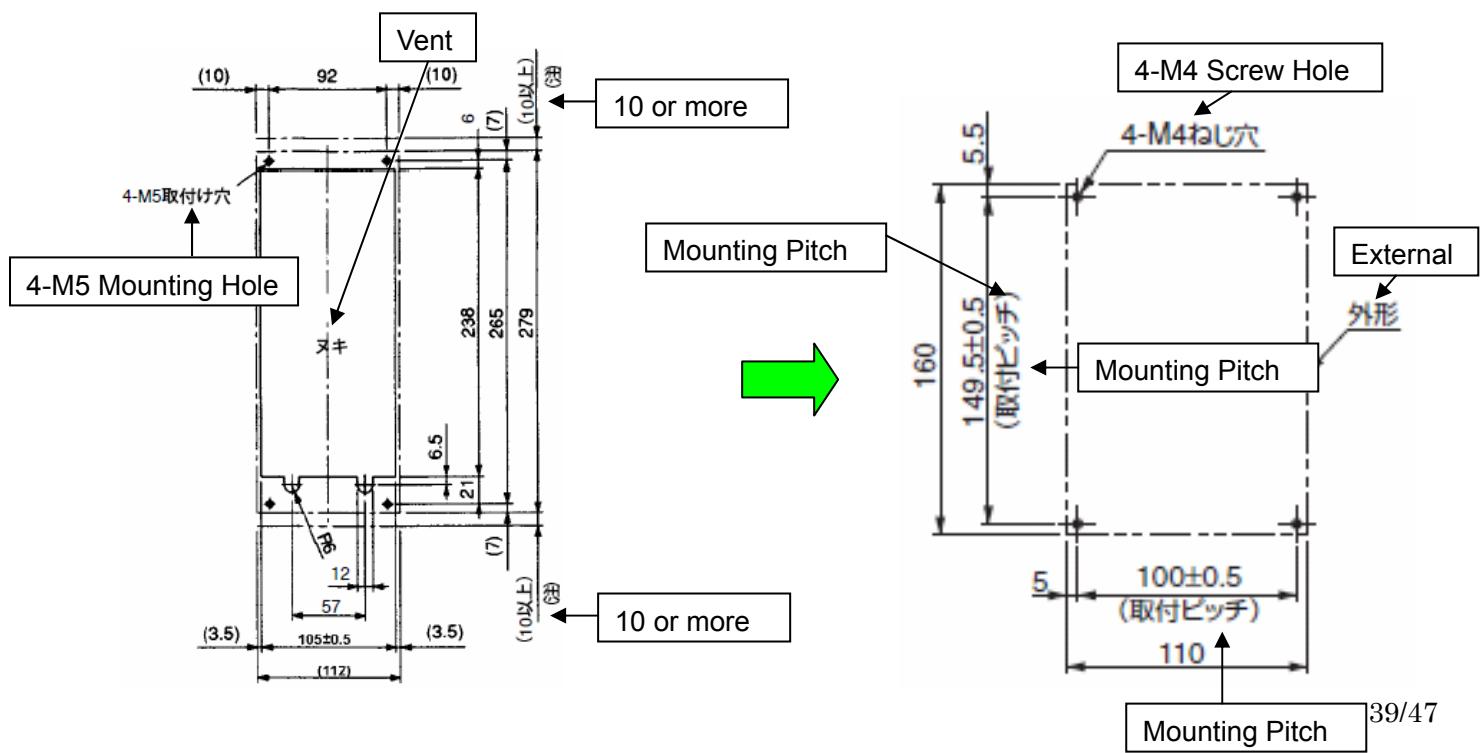

【AC100V, 200W or less and AC200V, 400W】

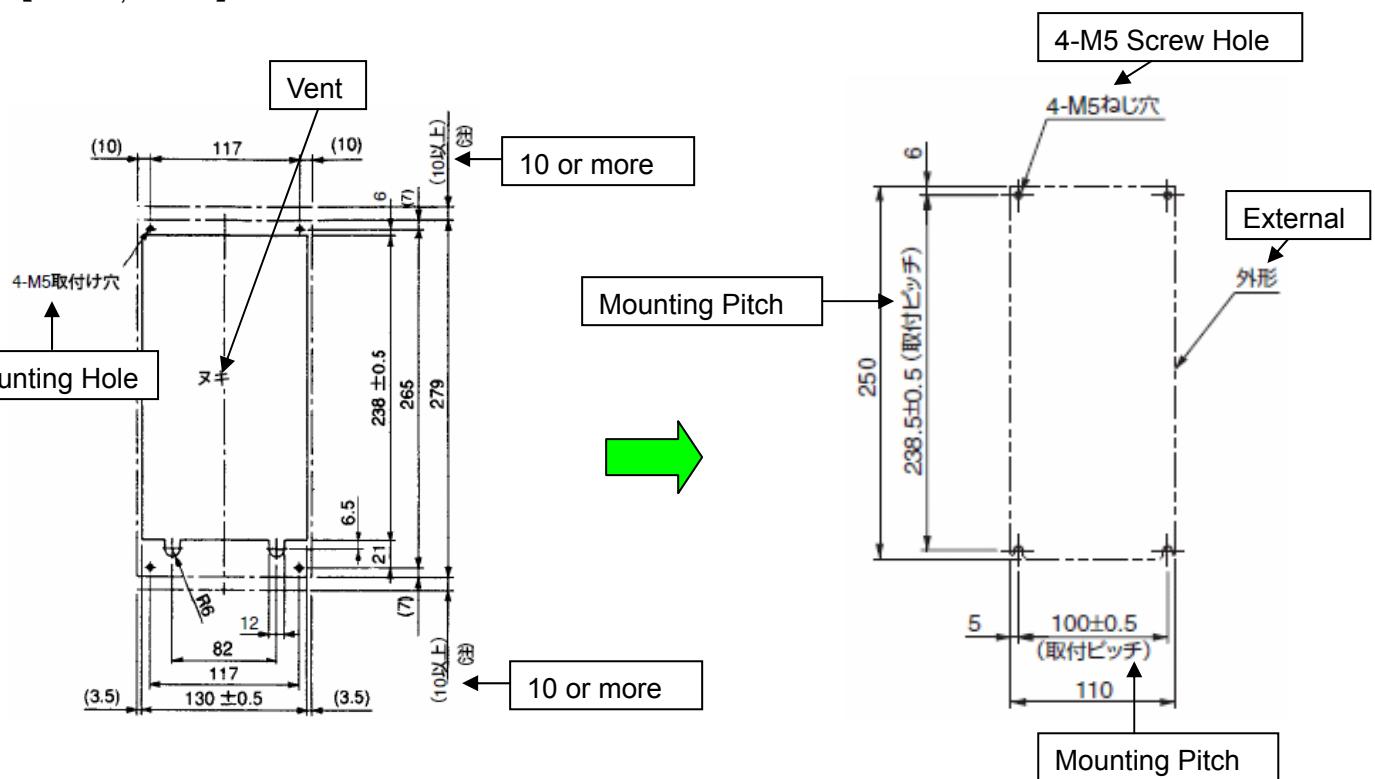

【AC100V, 400W and AC200V, 750W】

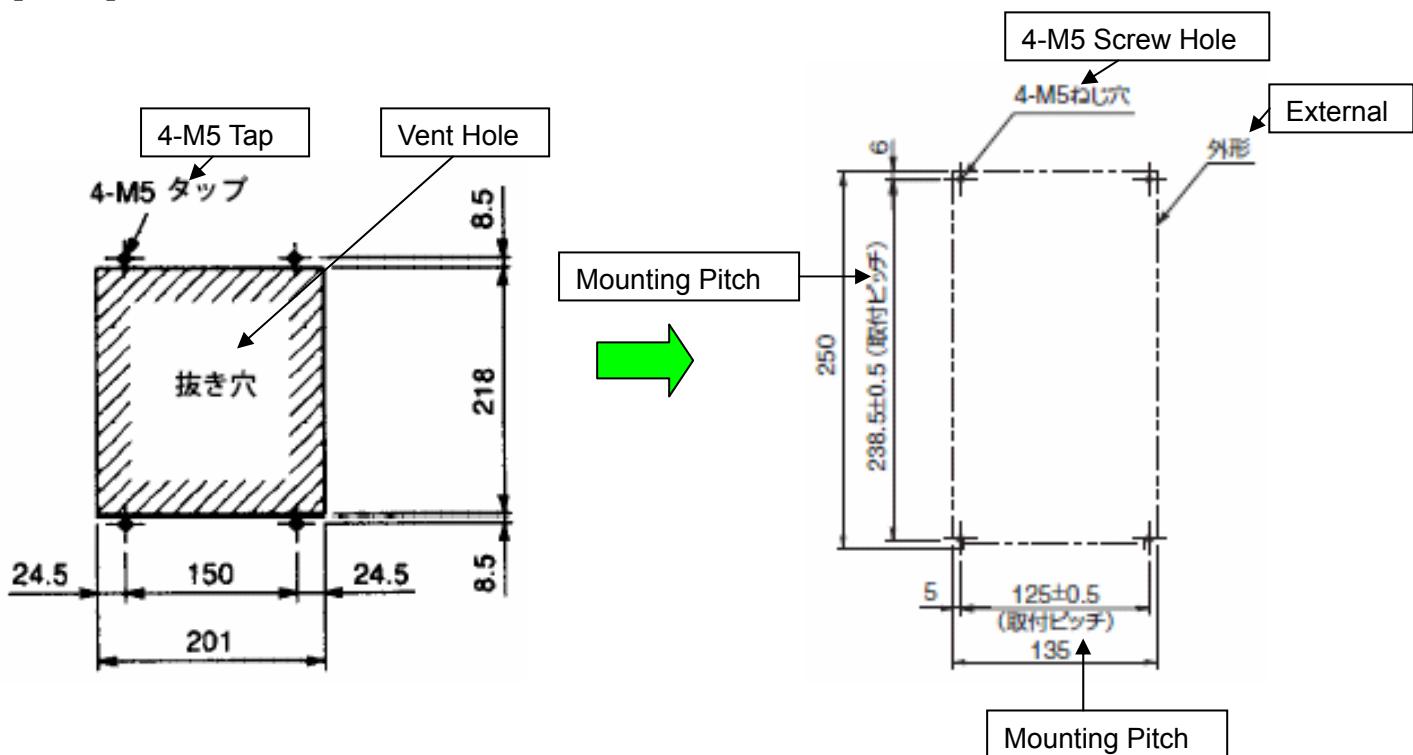

【0.5kW~1.5kW】

【2.0 kW, 3.0kW】

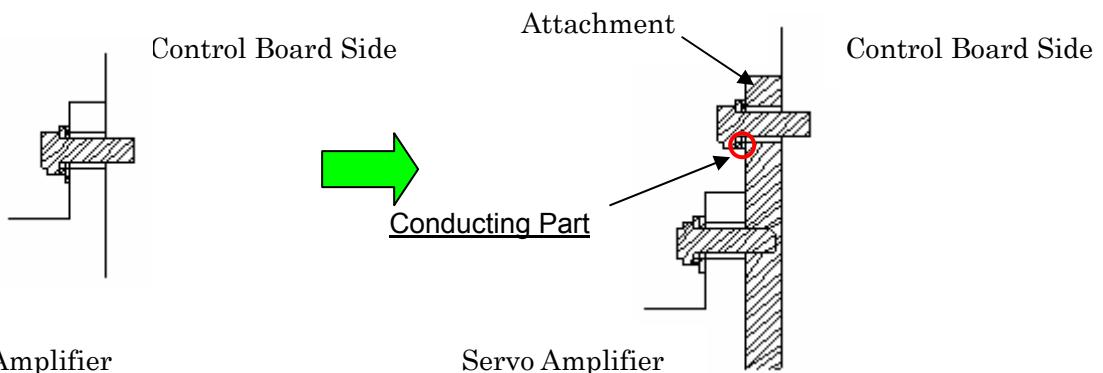

【5.0kW】

3-4. Notes when Installing Control Board

Please note the difference of the electrical conduction state of frame ground when producing the attachment to accommodate the difference of the installation hole size. An alarm may occur and the machine may operate improperly because the amount of noise changes when the electrical conduction state changes.

The frame ground of the control board and servo amplifier conduct through the installation screw.

When painting and/or surface treatment is given to the attachment for rust prevention, electrical conduction between the attachment and control board may be impossible.

4. Cable and Peripherals

All the cables and peripherals of Σ series are not compatible with Σ -V series's so please confirm the applicable products by referring to the catalog and manual, etc.

Please refer to the following comparison table for the type of the applicable products.

■ Connector for I/O Signal

Analog • Pulse Train Reference Type

Name	Type		
	Σ (for SGDA type)	Σ (for SGDB type)	Σ - V (for SGDV type)
Connector Terminal Block Conversion Unit	JUSP-TA36P	JUSP-TA50P	JUSP-TA50PG-E
			JUSP-TA50PG-1-E
			JUSP-TA50PG-2-E
One-sided individual pull out cable	DE9404859	DE9406969-1	JZSP-CSI01-1-E
		DE9406969-2	JZSP-CSI01-2-E
		DE9406969-3	JZSP-CSI01-3-E
Connector Kit (for CN1)	DP9420007	DE9406970	JZSP-CSI9-1-E

■ MECHATROLINK Communication Reference Type

Name	Type		
	Σ (SGD-□□□N)	Σ (SGDB-□□□N)	Σ - V (SGDV)
Connector Terminal Block Conversion Unit	JUSP-TA26P	JUSP-TA26P	—
Connector Kit (for CN1)	DE9411354	DE9411354	JZSP-CSI9-2-E

5.Parameter Converter

The user constant of the Σ series servo amplifier is able to be converted automatically into the parameter of the Σ -V servo amplifier by using a parameter converter in the Sigma V engineering tool SigmaWin+ Ver.5.00 or later.

The procedure is shown below.

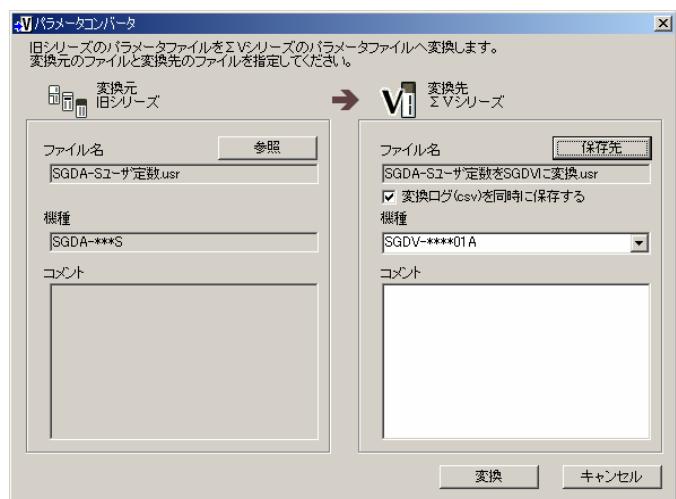

1. Open the Sigma Component of SigmaWin+ then confirm and save the user constant of the Σ servo amplifier.

If a user constant file taken from the servo amplifier is available use that file.

【Example of user constant save screen】

【Example of parameter converter screen】

2. Open Sigma V Component, and start the parameter converter.
3. Specify the user constant file of the Σ servo amplifier which was saved in step 1 to the former conversion file name.
4. Specify where to save the converted file.
5. The user constant is converted to the parameter when the conversion button is pushed. The part where readjustment might be needed is highlighted in yellow.

6. Click "Write to the servo" button on the parameter edit screen to write the conversion result in the servo amplifier after connecting to the writing destination servo amplifier online.

Parameter Converter Directions

- The tune-less function is valid for the parameter converted (Pn170.0=1)
- The gain parameter readjustment is necessary because there is a possibility that the rotor inertia of the motor changes when disabling the tune-less function (Pn170.0=0).
- Change the reference of the host controller, or change the setting of an electronic gear because the resolution of the encoder changes when using positional control mode.

Revision History

Revision No.	Date	Changes
0	6/12/07	First edition.
1	7/5/07	Use "L1" and the "L2" terminals as a main circuit terminal when using SGDV in the single phase power supply.
2	7/9/07	Changed the shaft end specification with the reduction gears due to DPI-C-7015.
3	11/7/07	Newly added the following. Notes of replacement from MECHATROLINK and parameter converter. Stop methods of auto-tuning, velocity bias, at alarm occurrence. And control circuit terminal explanation of CN1 of SGD-□□□N.
4	12/25/07	Newly added 100V model, models up to 200V medium capacity 5kW and SGMPS support.
5	2/12/08	Peripherals type correction.
